Lab Pandas

1. Import the chipotle.txt file, and save it in variable **chipo**.

   Hint: To load this file using read_csv() function, you need to provide another parameter: read_csv('filename',sep='\t')

2. Try the following functions and see how they work:

   a. chipo.head(10)

   b. chipo.info()

   c. chipo.shape

   d. chipo.columns

   e. chipo.index

3. What is the most ordered item, and what is the quantity?

4. What is the most ordered item in the choice_description column?

5. How many items were ordered in total?

6. What is the revenue?

7. How many orders were made in the period?

8. Average amount per order?

9. How many different items were sold?
